## **PROBE COMMENCES OPERATIONS AT SOUTH TIMBALIER 214 IN U.S. GULF OF MEXICO**

**Probe Resources Ltd.** (the “Company” or “Probe”) is pleased to announce that it has initiated operations for the drilling of the South Timbalier 214 A-6 Sidetrack #1 well in the U.S. Gulf of Mexico. The Hercules 202 jack-up drilling rig has been mobilized to the Company’s South Timbalier 198 platform. The Company is currently completing preliminary operations on the A-6 wellbore at the South Timbalier 198 platform in preparation for sidetracking the well. This A-6 sidetrack will penetrate the unproduced Buliminella 1 formation previously penetrated and logged in El Paso’s South Timbalier 214 #1 well. The Company expects to reach total depth and evaluate the well in mid December. Completion operations will immediately follow.

The South Timbalier 198 platform has an existing pipeline to onshore facilities. Minor refurbishment of the production facility is ongoing and expected to be complete concurrent with the completion of the well. Analogous wells in the area have experienced production rates from similar reservoirs in excess of 25 MMcf of gas per day.

### **About Probe Resources Ltd.**

The Company, along with its wholly owned subsidiary Probe Resources US Ltd. located in The Woodlands, Texas, is an oil and natural gas exploration and production company focused on generating, acquiring, developing, and operating drilling prospects within the Texas and Louisiana Outer Continental Shelf of the Gulf of Mexico.
